

## Study guide:

- ✓ Read your text and online notes about data use in medical geography (p403), the types of rates and ratios (p404-406) calculated based on those data, and map types (p446-449).
- ✓ Review all of the diffusion-related lecture notes online and relevant sections in the text (p263-267, and p306-307).
- ✓ Also, read the sections on the biometeorology of health status (p151-170) direct biometeorological influences, biological rhythms, the influence of the weather, seasonality of birth and death, and especially the role of visible light in daily bodily functions.
- ✓ Carefully read all of your online notes on **all** of the vectored and non-vectored infectious diseases discussed in class. Read one slide at a time. Make sure you have a full understanding of the overall message in that slide. Do not focus on individual words or sentences.
- ✓ Pay attention to the sections on global response to the challenges posed by the three major infectious diseases.
